

Graduation Rates By Race/Ethnicity **Ross Peacock, Institutional Research**

Change in Race/Ethnicity Reporting - In 2010, the federal government required a new reporting protocol that changed, sometimes dramatically, counts by race and ethnicity. We have adopted this protocol for local reporting purposes but for trend analysis, *we continue to use the pre-2010 method*. The two methods yield incomparable results and the new method cannot be used to track any changes from years prior to 2010. The primary differences between the former methodology and the more recently required federal methodology are:

- Anybody selecting Hispanic 'Yes' is counted only as Hispanic regardless of race. Hispanic trumps all other responses.
- The addition of 'Native Hawaiian/Pacific Islander' as a second Asian American category.
- Anybody who is *not* Hispanic and selects *more than one* race code is counted only as 'two or more'.
- Only students who are *not* Hispanic and select *only one* race code are counted under that selected race.

The net changes the new federal method causes are a reduction in the number of African American, Native American and Asian American numbers and increases in the number of Hispanics and the newly created Two or More category. This new protocol, though consistent with that used by the US Census, results in apparent changes in student composition when in fact, such may not have occurred. The only comparison that one can make from the new to the old method is to create a category that represents all people of color by combining African American, Native American, Asian, Hispanic, Native Hawaiian and Two or More in the new system and African American, Native American, Asian American and Hispanic in the old system. Comparing them individually cannot be done in any meaningful way and that is a very unfortunate result of the new protocol.

Graduation Rate – This is the percentage of first-time, first-year students entering in a given year and graduating by a specified time-frame. The time-frame required by the federal government for four year colleges is within six calendar years after entry. For example, if 600 first-time first-year students enter in year X and 500 graduate within X plus six years, the graduation rate is 83% (500/600).

Additionally, we track the percentage of students who enter in a given year and return the following year (commonly referred to as retention rate). Students who do not return (i.e. are not retained) are not necessarily permanently departed from Oberlin as some may be on leaves with the intention to return. For federal reporting purposes, we are only allowed to count students who are formally enrolled. The document included here includes retention information and graduation rates within five, six and more than six years.
